

Expert QC – where are we now?

- Little or no progress because nothing to work on.
- Considering methods?
  - Crowd sourcing checked by experts?
  - Full expert hand-qc of auto-qc outputs?
  - Machine learning?
  - A mix?
- Tools?
  - Web interface for crowd sourcing – hosting?
  - Java, Python or Matlab for expert use?
  - Database format and access (local or central?)

- People!
  - Volunteers?
  - Experts?

Someone (a TEAM) needs to check the failures from AutoQC
